# 7.1 to 7.3 Problem Solving

Name: \_\_\_\_\_ Per: \_\_\_\_\_ Date: \_\_\_\_\_

Show ALL work in the space provided.

Write an exponential function that models the following situations, then solve if necessary.

<p>1. In 1980, wind turbines in Europe generated about 5 gigawatt-hours of energy. Over the next 15 years, the amount of energy increased by about 15% per year.</p>	<p>2. In January, 1993, there were about 1,313,000 Internet hosts. During the next five years, the number of hosts increased by about 100% per year.</p>										
<p>3. The tuition for the 2011-2012 school year for the UC was \$12,000 and is expected to increase 16% per year. What will tuition be in 2018-2019?</p>	<p>4. There are 20,000 homes in Kerman's sphere of influence. Each year 10% of these homes are disconnected from their septic system. Find the number of homes on a septic system in 5 years.</p>										
<p>5. A new computer costs \$2,000 and decreases in value 60% each year. What is the value of the computer after 5 years?</p>	<p>6. In 1990 the population of Kerman was 5,000. If the annual rate of increase is about 5%, write an equation that expresses Kerman's population 20 years later.</p>										
<p>7. Bacteria in a culture are growing exponentially with time, as shown in the table below.</p> <table border="1" data-bbox="315 1493 574 1686"><thead><tr><th colspan="2">Bacteria Growth</th></tr><tr><th>Day</th><th>Bacteria</th></tr></thead><tbody><tr><td>0</td><td>10</td></tr><tr><td>1</td><td>40</td></tr><tr><td>2</td><td>160</td></tr></tbody></table> <p>Write an exponential function to express the number of bacteria, <math>y</math>, present at any time <math>t</math>.</p>	Bacteria Growth		Day	Bacteria	0	10	1	40	2	160	<p>8. A certain radioactive element decays over time according to the equation <math>y = A\left(\frac{1}{2}\right)^{\frac{t}{500}}</math>, where <math>A</math> = the number of grams present initially and <math>t</math> = time in years. If 1600 grams were present initially, how many grams will remain after 2000 years?</p>
Bacteria Growth											
Day	Bacteria										
0	10										
1	40										
2	160										

<b>9.</b> State the domain and range of $y = 2^x$ .	<b>10.</b> State the domain and range of $y = 2^x + 3$ .	<b>11.</b> Describe the translation of $y = 2^x + 3$ from $y = 2^x$ .
<b>12.</b> Graph #9 and #10 on the same grid.		
<b>13.</b> State the domain and range of $y = \left(\frac{1}{4}\right)^x$ .	<b>14.</b> State the domain and range of $y = \left(\frac{1}{4}\right)^{x+2} - 3$	<b>15.</b> Describe the translation of $y = \left(\frac{1}{4}\right)^{x+2} - 3$ from $y = \left(\frac{1}{4}\right)^x$ .
<b>16.</b> Graph #3 and #4 on the same grid.		
<b>17.</b> Rewrite $243 = 3^x$ in log form.	<b>18.</b> Rewrite $\log_4 y = 5$ in exponential form.	
<b>19.</b> Evaluate $\log_2 64$ .	<b>20.</b> Evaluate $\log_e 1$ .	<b>21.</b> Evaluate $\log_2 \frac{1}{32}$
